

PRODUCT DESCRIPTION

CD100i is a wax solvent dispersant . It is a high graded condensate suitable for dissolving and dispersing a broad spectrum of paraffin wax deposits. Medium light condensate has been mixed with paraffin solvents an enhanced with a proprietary wax crystal dispersant package. It is a high-performance low-cost paraffin solvent.

APPLICATION AND USAGE

The CD100i wax dispersant has proven to be very effective in batch treatments to both solvate and disperse undissolved wax minimizing wax deposition in pipelines or tubulars. The combination of effective wax solvation and dispersancy ensures that stabilized condensate is carried through tanks and meters into the sales pipeline system.

Treatment volumes will vary depending upon the severity of either the surface or down-hole wax deposition loading.

PHYSICAL PROPERTIES

Appearance : Clear to Amber
Specific Gravity : 0.626 – 0.707 g/ml @ 25°C
Pour Point : < - 40°C
Flash Point : < -35 to 10°C
pH Factor : N/A
Solubility : Hydrocarbon

HANDLING AND STORAGE

Proper PPE is recommended when handling. Consult MSDS prior to handling. Please check for compatibility prior to blending with other chemicals including neutralizing agents.

Store CD100i in a cool dry place.

AVAILABILITY

CD100i is available in bulk or drum quantities.
